

..enabling technology innovation...

Who are we?

We are a Consulting Practice with ‘best in class’ resources that are used to deliver world class Technology Solutions to our customers.

We recognize that the modern workplace is dynamic, complex and very fast moving and therefore we pay particular attention to ensuring that the objectives for each assignment are kept firmly in focus at all times.

One key aspect about our organization is that we have been able to build very strong and loyal relationships with our key customers and this has been invaluable in underpinning our development and success to date.

Whether your company is a large corporation with a complex data centre infrastructure, or a small business with minor virtualization and cloud needs, MacLellan Technology Solutions has state-of-the-art solutions to meet your specific needs.

Our ultimate objective is to provide the comprehensive, reliable and cost effective solutions which not only help our customer to increase their profit but also improve their service quality.

What Do We Do?

MacLellan Corporate Consulting Solutions

We are a global technology consultancy company that believes in the power of technology to transform our customers business. To support technology worldwide, we offer high-quality, innovative solutions.

MacLellan Engineering Sector Solutions

We design and implement intelligent engineering solutions for companies in the oil & gas, marine & offshore, power, chemicals, mining & minerals and pulp & paper industries.

MacLellan Global Recruitment Service

MacLellan Global Payroll Management Service

We provide workforce management services and human resources solutions. We offer a full, comprehensive and compliant Swiss Payroll, Work Permit and Management service.

Engineering Sector Solutions

Intelligent engineering sector solutions

We design and implement intelligent engineering sector solutions for companies in the oil & gas, marine & offshore, power, chemicals, mining & minerals and pulp & paper industries.

Our solutions are based on:

- Plant, Marine and Enterprise products from AVEVA Plc., Cambridge, United Kingdom
- C# developments complimenting AVEVA products through enhancements and interfaces to engineering and corporate systems

Our highly experienced consultants have many years of experience across industries and engineering disciplines. Their experience covers specification, development, deployment, configuration and support of integrated engineering systems solutions. Specialist areas are integrated 2D and 3D design systems with corporate applications.

Engineering Services

Continuous improvement

From the outset of the project our qualified specialists are involved, providing the customer with valuable analysis and consultancy.

Every project is led by the assigned project manager, who coordinates the necessary information exchange, organizes technical meetings, monitors work fulfilment in accordance with specifications and supervises the project throughout its entire lifecycle.

Our customers greatly appreciate MacLellan's clear and comprehensible engineering solutions, which differentiates MacLellan from all other engineering services companies.

Many of our services are available as an "outsourcing" option. Please contact us for more details or to discuss your requirements.

Our specialities

Our specialities cover the following areas:

- AVEVA Enterprise solutions for information management
- AVEVA software for plant and marine engineering and design
- AVEVA product portfolio training, including AVEVA Everything 3D (E3D)
- Enterprise program and project management
- Plant / Product Lifecycle Management (PLM)
- Engineering systems development and implementation
- Project execution implementation & support

Working with AVEVA's comprehensive range of solutions for engineering, our specialities can service businesses of all sizes.

Our Methodology

Benefits of a distributed team

Our talented team of engineers and developers is geographically distributed, and we believe this directly contributes to the success of the projects and offers benefits to our clients.

Team formation

We identify the right individuals to fill the required roles and form a complete, cross-functional team. Our expertise in the entire product development lifecycle, coupled with our experience in supporting distributed teams, means we know how to form the group necessary for the successful execution of your project.

Local elements

Having the right balance of local and distributed team members is important. We serve in a very involved project management and lead development role, while defining various other roles and orchestrating our team towards the successful development of your project.

Highly specialised skills

AVEVA Plant Engineering, and related technology customisation and development skills are difficult to source. However, we employ some of the best talent in the AVEVA product specialist community. Our team possesses highly specialised expertise across various functions.

Our engineering team

Our engineering team's expertise:

- Background
 - AVEVA, AMEC, ALSTOM, General Electric, Scottish & Southern Energy, Iberdrola, Vattenfall
- Experience
 - Engineering across various disciplines and industries.
 - Requirement capturing, Project management, Software development, Software delivery
- Knowledge Base
 - AVEVA Enterprise, 2D & 3D products, both legacy and current including AVEVA Everything 3D (E3D).
 - Integration with business applications and corporate systems
- Advantages
 - System Architect and all Senior Developers are ex. AVEVA core product and application developers
 - All team members have extensive engineering experience across multiple disciplines and industries
 - Efficient delivery through distributed teamwork with flexible local presence as necessary
 - Strong project management to control scope, schedule, budget and resources
